HARSH DUBEY

AI Full Stack Developer

Dwarka, Delhi | +91-6387550457 | harshdazz4@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

AI Full Stack Developer with production experience building LLM powered product features across React, Next.js, and FastAPI, from RAG ingestion and API layer through to streaming, responsive user interfaces. Comfortable owning a feature end to end.

PROFESSIONAL EXPERIENCE

BNCW ENTERPRISES | Frontend Developer

September 2025 to September 2026

Full stack contributor on a Next.js and FastAPI platform serving an LLM powered product, owning frontend surfaces while shipping backend endpoints, integrations, and RAG pipeline work.

- **AI Chat Feature, End to End:** Built an **LLM powered** research assistant from the FastAPI retrieval endpoint through to the **React** interface, handling multi turn conversation state, request lifecycle, and error recovery.
- **RAG Ingestion Pipeline:** Extended the document ingestion pipeline for a **pgvector** backed **RAG** service in Python, covering source contracts, content preview, manual sync, and backfill paths that keep the retrieval corpus current.
- **Streaming and Safe Rendering:** Implemented the streaming response layer over **Server Sent Events**, rendering model generated markdown through a sanitized pipeline that blocks script injection from untrusted output.
- **Backend for Frontend Layer:** Built **Next.js** API routes as a backend for frontend layer over external market data providers and internal services, keeping provider credentials server side and exposing one typed contract to the client.
- **REST API Development:** Shipped **FastAPI** endpoints with **SQLAlchemy** models and **Pydantic** schemas, covering route design, permission guards, and consistent error contracts, with **pytest** coverage on new paths.
- **Third Party Integrations:** Integrated **AWS S3** for media upload, **AWS SES** for transactional email, and external market data providers, wiring webhook and API flows between backend services and the client.
- **Frontend Engineering:** Built reusable component libraries and responsive layouts with **Redux Toolkit**, **Tailwind CSS**, and **Material UI**, delivering UI surfaces including a rich text editor, drag-and-drop reordering, and interactive **Recharts** dashboards unit-tested with **Vitest**.
- **State and Authentication:** Structured the Redux Toolkit store and client data layer, and built login, registration, password reset, and email verification flows against **JWT** backed APIs with route guards and session handling.

PROJECTS

ShelterScape | React.js, Node.js, Express.js, MongoDB, Clerk, Stripe, Cloudinary, Docker

- Built a full stack property rental and booking platform, designing the **MongoDB** schema for listings, bookings, and users, with **role based access control** and secure authentication.
- Implemented **Stripe** payment processing and end to end booking workflows, integrated **Clerk webhooks** for real time user sync, and containerized services with multi stage **Dockerfiles**.

AI Powered Mock Interview Platform | React.js, TypeScript, Firebase, Clerk, Google Gemini AI

- Built an AI driven mock interview platform with authentication, session management, and personalized progress dashboards.
- Integrated **Google Gemini AI** with structured **prompt templates** and response parsing to generate role specific questions and evaluate answers.

EDUCATION

United College of Engineering and Research, Prayagraj | Bachelor of Technology in Computer Science **2021 to 2025**

TECHNICAL SKILLS

AI and LLM: RAG Pipelines, Document Ingestion, Vector Search, pgvector, Embeddings, Prompt Engineering, LLM Integration, Anthropic Claude, OpenAI, Google Gemini, Langfuse

Backend: Python, FastAPI, Node.js, Express.js, RESTful APIs, SQLAlchemy, Pydantic, JWT Authentication, Webhooks, pytest

Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+), Redux Toolkit, Tailwind CSS, Material UI, Shadcn UI, HTML5, CSS3, Responsive Design, Vitest, React Testing Library

Databases: PostgreSQL, pgvector, MySQL, MongoDB, Firebase Realtime Database

Cloud and Tools: AWS (S3, SES, RDS), Cloudflare Workers, Docker, Git, GitHub Actions, Bitbucket, Stripe, Sentry, PostHog, Jira
